Engineer → director	Fortune 500 to startup	7 direct reports	React, MongoDB, Scrum, Java

Experience

Sophos (https://sophos.com)

2019 - present

Senior Software Engineer 2 · **Sophos MDR** (https://www.sophos.com/en-us/services/managed-detection-and-response)

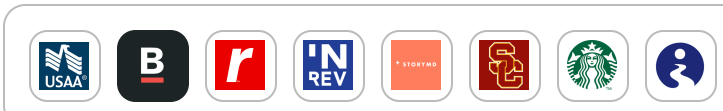

On the team building Sophos MDR, a 24/7 managed detection and response service used by 40,000+ organizations, where analysts and agentic AI investigate and respond to threats on the customer's behalf across 500+ integrations spanning endpoint, network, cloud, identity, and email. Full-stack work across the TypeScript React front end and the NestJS services on AWS behind it, with infrastructure as code and feature-flagged delivery. Member of the Sophos AI Champions team and author of its AI orchestration pipeline — cross-repo automation that carries a Jira ticket through to an open pull request, scoring tickets for implementation readiness and rewriting the ones that fall short, running a coding agent against the target repository, then validating through lint, unit, and component tests where each failure triggers a targeted agent fix and retry before the run commits, pushes, and opens the PR. Runs are checkpointed, so a long one resumes at the phase it stopped in.

TypeScript · React · NestJS · AWS · Terraform · GraphQL · OpenAPI · PostgreSQL · DynamoDB · SQS/SNS · LaunchDarkly · Claude Code · Codex

Freelance

2016 - 2019

Software Consultant

Lead web developer for a range of clients — insurance, government, higher education, retail, and health startups. Particularly adept at UX/UI work favoring clean, simple user interfaces, and at blending structure, design, and behavior in web applications.

Rails 5 **React** Java Ruby Postgres MySQL Elasticsearch Heroku AWS

Rackspace (https://www.rackspace.com)

2012 - 2017

Senior Software Developer

Part of an agile team designing Rackspace's internal sales quoting system. Key contributor across the user interface, RESTful API design, and NoSQL database architecture. Author of two Ruby gems providing access to Rackspace's billing and inventory systems over XML and JSON APIs.

Ruby on Rails MongoDB REST APIs Bootstrap

Tetco (https://www.tetco.com)

1999 - 2012

IT Director / Senior Software Developer

Led the company's entry onto the web and built cost-saving applications that improved collaboration across subsidiary companies. Directed all technology initiatives — development, network and communications infrastructure, security, PCI compliance, deployment, and retail technology — leading 19 IT professionals including seven direct reports.

Java JSP MS SQL Server PCI compliance Team leadership

Projects

pointing.page (https://pointing.page)
A story pointing React app.

Tally Ho (https://tally-ho.petey.live)
A game night score keeper. Add players fast, give each a color and emoji, then tap, swipe or hold to score.

Delish (https://delish.petey.live/welcome)
A mobile-first recipe box — upload recipe screenshots and in-browser OCR turns them into searchable recipe cards.
